

CUSTOMER INFORMATION

STELLA SLIDING DOOR-CALCULATOR

Dear Customer,

during the spring, our Stella design program has been developed and the following new features have come to facilitate the use of sliding door calculators:

SEARCH FUNCTIONS

- The order search functions have been improved, so the page layout has changed slightly

SLIDING DOORS

- **Determining door widths:** the feature affects the door widths in the opening. Added to sliding doors and doors ordered with frames (not partition sliding doors).
- **Three-rail sliding door opening:** possibility to divide sliding doors to separate rails with certain profile models. (Not available with M4-10 black profile). For the time being we are using a single rail with the two rail system (2+1 rail system combined depth being 120 mm). Later on we are adding three-slot rails in to our selection.
- **Partition-doors:** added new option for load bearing doors with wall mount installation. Stella has a new option to add a single rail system with wall mounted installation. NOTE! Endcaps for this are at the moment only available in aluminium color (white and black color options are available in the near future). Wallbrackets are always with a steel finish.
- **Grid-doors:** added option to choose from two different list widths; 16 mm and the new option is 26 mm.
- **Loft-doors:** ordering from Stella is now possible under compartment-doors calculator. There are two widths 930 and 1030 mm, height 2150 mm. Loft doors can be ordered with or without handle and with or without slow-motion.

Kind regards,

CARLO CASAGRANDE & CO OY
